GDPR

Is your company ready?

General Data Protection Regulation (GDPR)

In an increasingly interconnected economy, data related to daily life, location and personal interests are becoming increasingly accessible. It happens because people often provide personal information when hiring a service or when making an online purchase, without any guarantee of what will be done with this data, for how long it will be saved or to whom it will be conveyed. Personal data often ends up circulating on the internet which is the result of countless cases of data leakage or misuse, which usually ends up being inconvenient and causing a lot of headaches for the data owner.

In this context, the General Data Protection Regulation (GDPR) was created with the objective of increasing a companies' responsibility for how they handle personal information as well as preventing abuse and the unauthorized use of data. It is important to remember that personal data does not belong only to customers, it also applies to the data of employees, service providers and shareholders, among others.

Complying with this regulation means ensuring that all personal data managed by the company are collected legally. In this way, the owners of data are informed about how their data is treated and the organization ensures that they are kept safe, in other words, protected against breaches.

Challenges

Companies of different scales and segments are still struggling to adapt their activities and ensure compliance with the GDPR. This is because the regulation does not only affect the IT department. It must be implemented and followed by several other areas of companies such as human resources, marketing, finance, and any other department that deals with personal data. Therefore, the management of all this information becomes extensive and laborious.

Moreover, there is a need to implement documents, policies, terms and change of contracts, which results in a very complex governance of personal data governance, especially when performed manually.

The challenges are numerous and the legal and financial implications are extensive. Those who violate the GDPR privacy and security standards will suffer severe penalties. It is for this reason that it is necessary for all organizations to dedicate themselves to this data protection standard that the regulation imposes, making structural and mainly cultural adjustments while aiming to implement rules of conduct that apply to the entire company.

How can SoftExpert help?

Complying with the requirements of the GDPR represents a series of challenges for all organizations. However, with the right technological support, the whole process can become simpler and faster. Currently, there are software solutions that allow to deal with the main aspects required by the resolution in a single work environment. The SoftExpert Excellence Suite for example, is a complete corporate solution for integrated management of compliance, innovation and digital transformation.

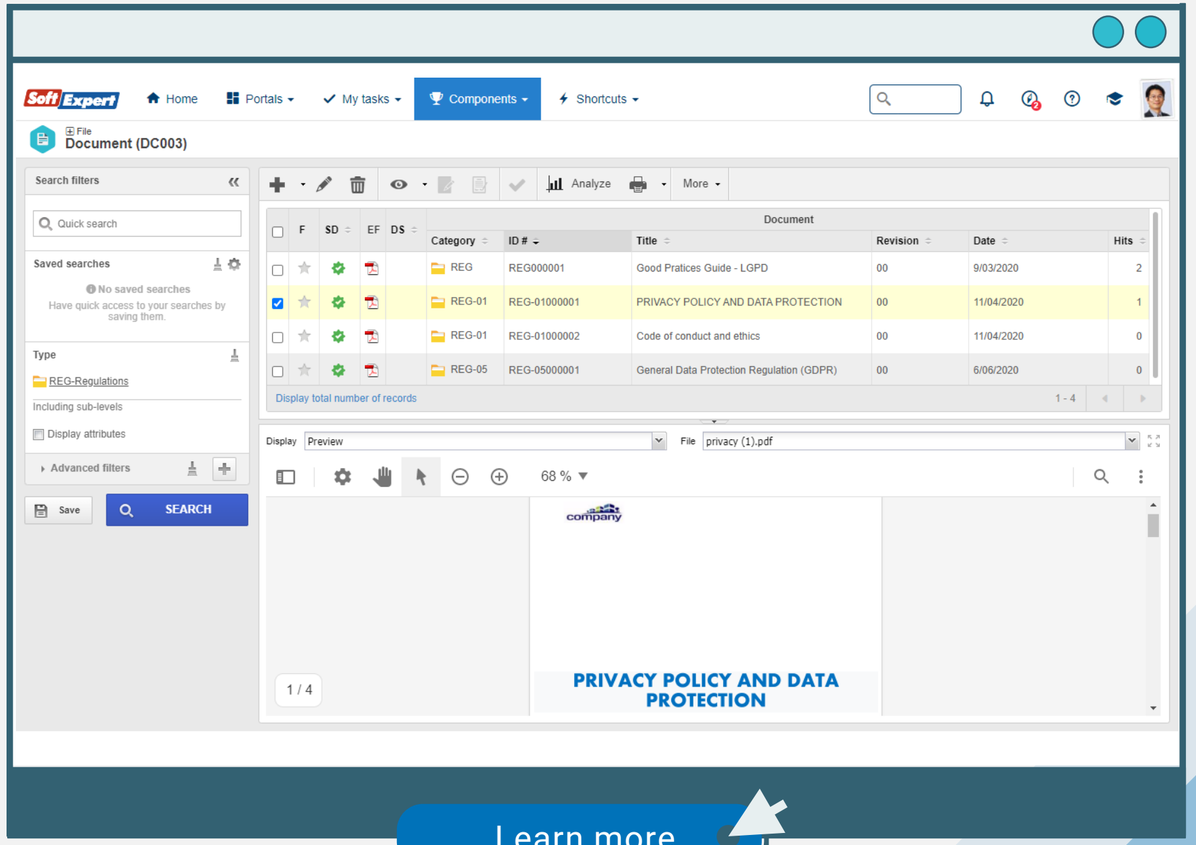

The platform has interconnected applications that promote collaborative work and replace several isolated management systems that address only specific points of the business. Thus, it is possible to manage the main aspects of the law and, at the same time, avoid inconsistency of information, losses due to inefficiency, errors caused by duplication of functions and lack of visibility.

Document Management

Most of the personal data that organizations have is recorded in the documents that are stored in the companies. This information can be made available in both printed and electronic documents. In this way, document management and the GDPR have a direct relationship.

Moreover, the need to implement a culture focused on the security of personal data. This requires a policy that is always up-to-date and disseminated. A company that has clarity in document management processes can more easily adapt to the regulation.

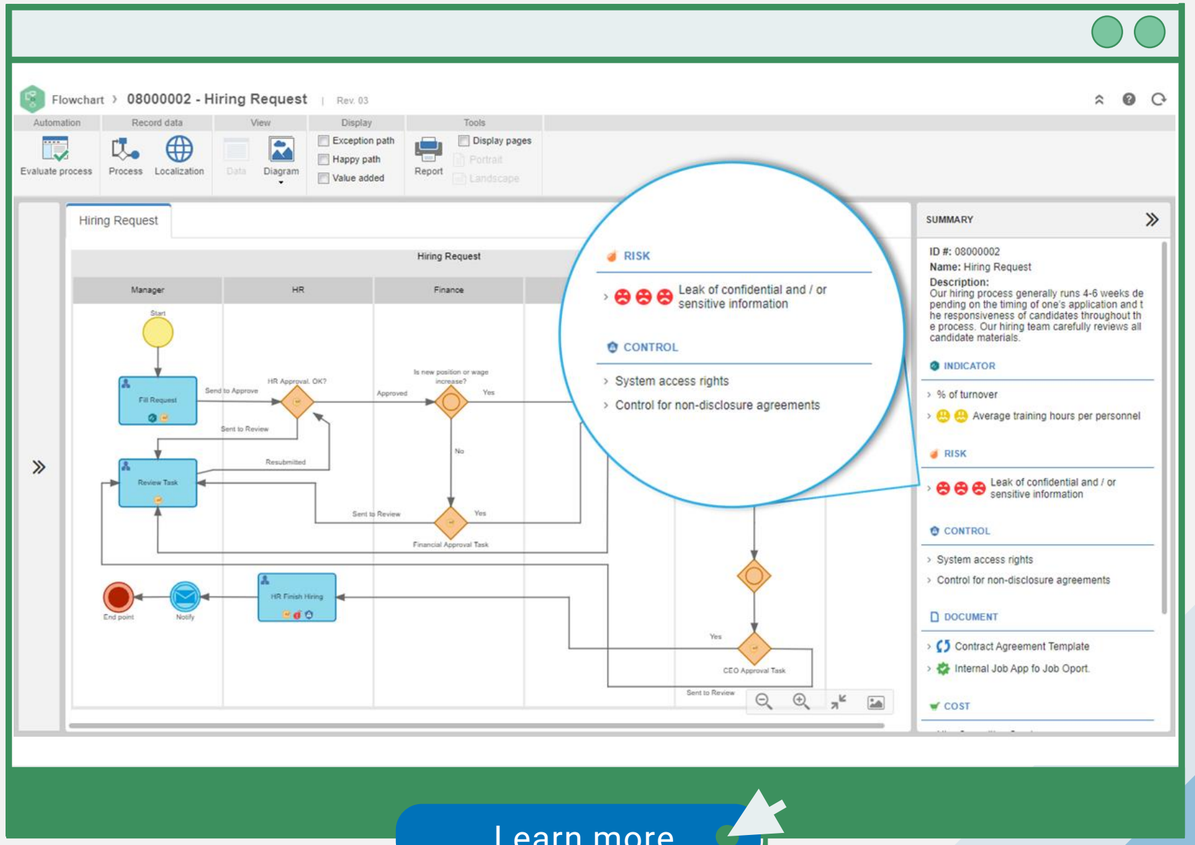

SoftExpert Document is a software that allows organizations to effectively and efficiently automate the management of electronic and paper documents throughout their entire life cycle. In this way, it is possible to store them safely and ensure that legal requirements are effectively met.

Data mapping in processes

Data mapping is an essential tool when a company is in the process of adapting to the GDPR standard. This data gathering must reflect the path through which a personal data pass within the company, including the processes and procedures through which the data runs through .

Using modeling based on the BPMN standard (Business Process Model and Notation), the SoftExpert tool allows users to model process flows, identifying which are the personal and / or sensitive data that that activity handles. In addition, it is possible to associate possible risks to which the data is exposed at each stage and to determine controls to mitigate them.

Data mapping in processes

After mapping data from the flowcharts of each process, the SoftExpert tool also makes it possible to manage information through personalized portals.

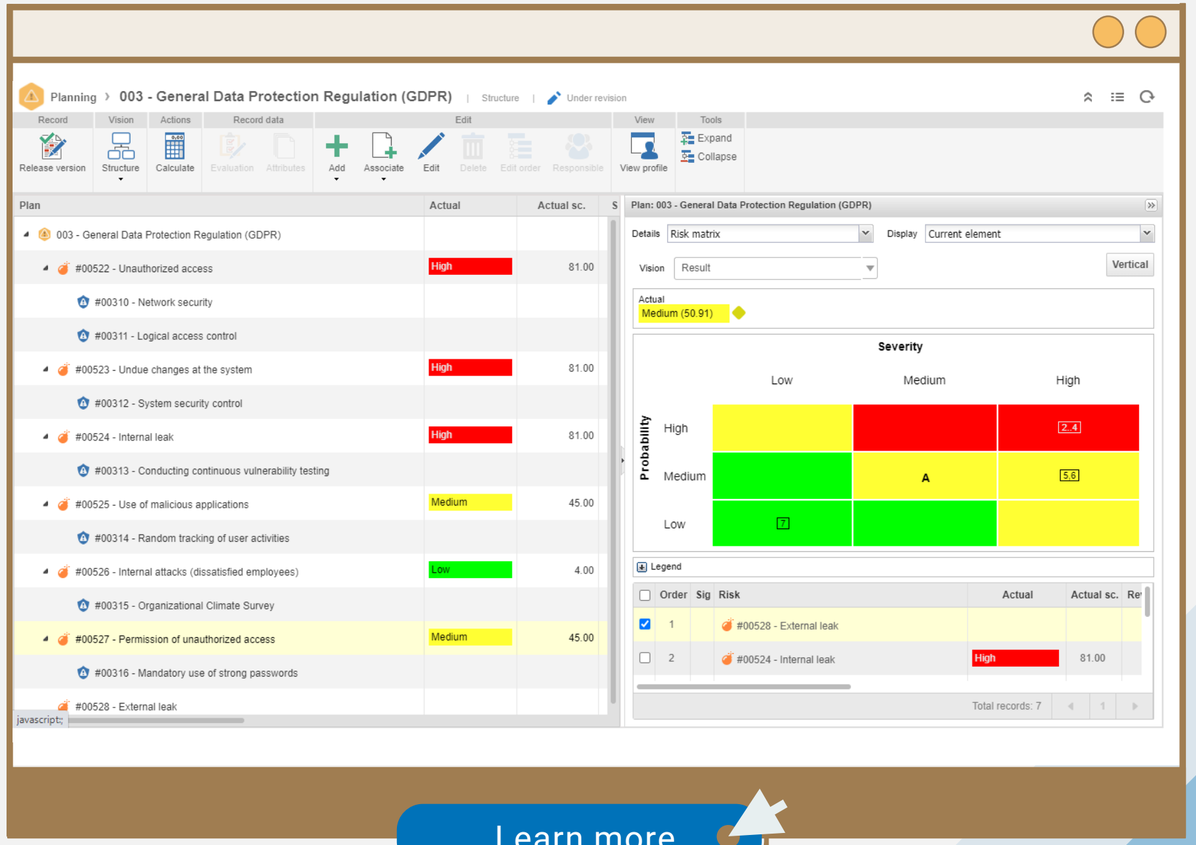

All data collected are displayed by means of graphs and interactive tables and are updated automatically and in real time. In this way the Data Protection Officer's (DPO) day to day becomes much easier.

Risk Management

In order to maintain personal data security and to prevent processing in infringement of the GDPR, the organizations need to determine guidelines for the processing of personal data, especially through a risk management program. These measures should ensure an appropriate level of security, considering any possible risks within the processing of personal data, such as accidental or unlawful destruction, loss, alteration, unauthorized disclosure of, or access to, personal data transmitted, stored or otherwise processed which may specifically lead to physical, material or non-material damage.

The SoftExpert Excellence Suite covers all aspects of the risk management process, from initial identification, through assessment and analysis, to mitigation and monitoring, managing incidents and ensuring the execution of actions and proper communication.

Management of Personal Data Breach

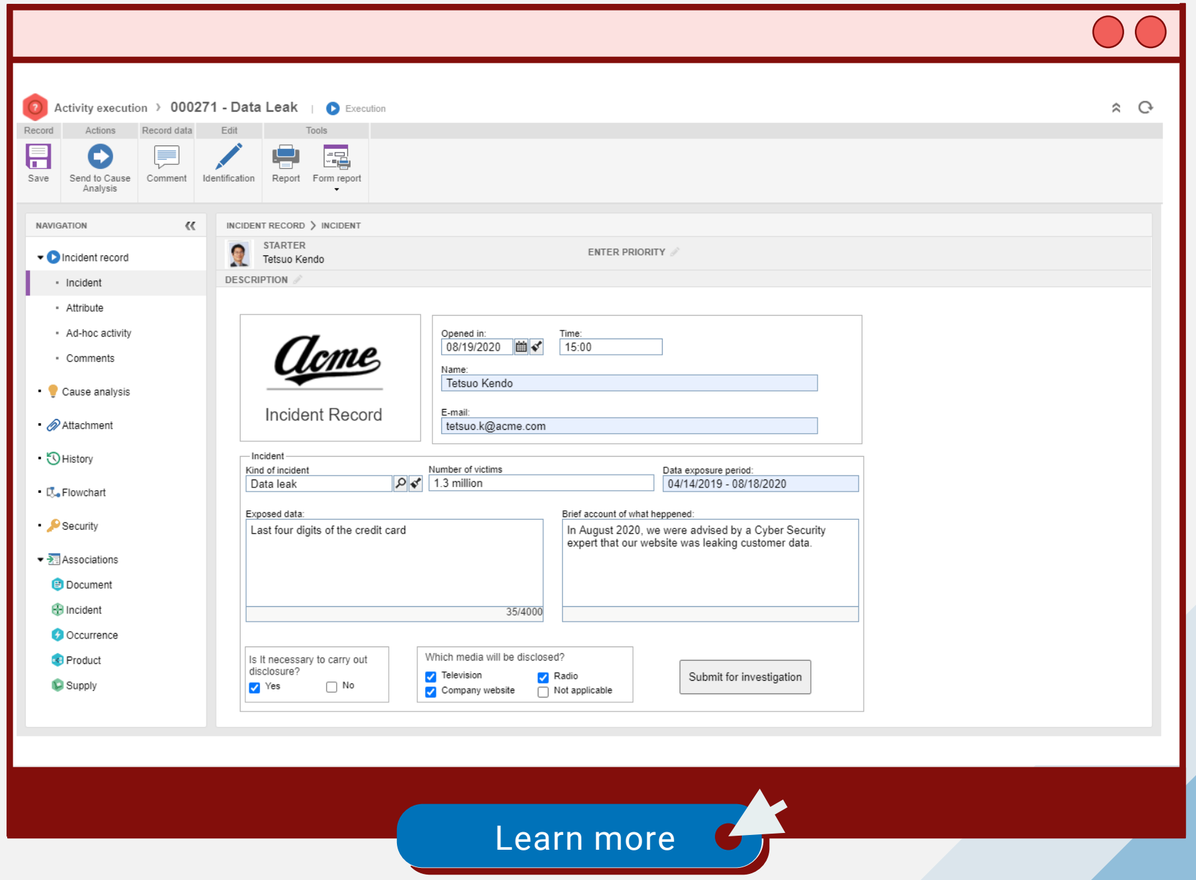

The GDPR requires that in case of a personal data breach, the controller must notify the competent control authority of the fact. This notification must contain information such as:

- Nature of the personal data breach including the categories and approximate number of
- data subjects concerned;

- Name and contact details of the data protection officer (DPO) or other contact point where more information can be obtained;

- Description of the likely consequences of the personal data breach;

- Description of the measures taken or proposed to be taken by the controller to address the personal data breach, including, where appropriate, measures to mitigate its possible adverse effects.

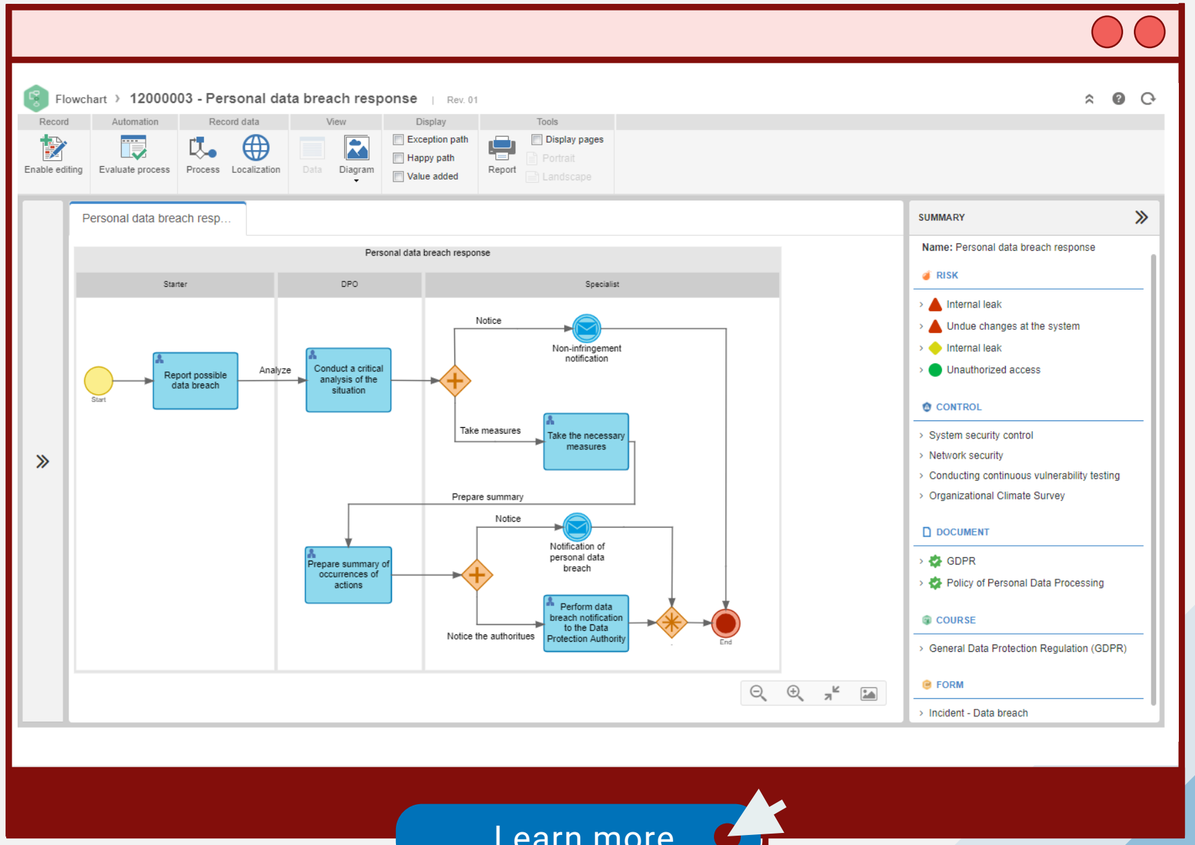

Management of Personal Data Breach

To report a personal data breach, the SoftExpert solution offers an electronic forms modeler, which captures all the details of the occurrence.

These forms can be integrated into automated processes which manage the data breach response flow from start to finish.

The tool manages all stages of the process life cycle, from modeling and optimization to automation, execution and monitoring according to the needs of each company.

Occurrence Management

In this context, it is apparent that protecting data is not enough. Organizations must be prepared in case of possible violations. Thus, in addition to describing a report with all the data of the event, they need to be prepared to carry out a complete investigation of the situation.

SoftExpert Excellence Suite is software designed to help identify the root causes of problems. It offers all the necessary resources that assist in the investigation of incidents through the cause analysis tool that best suits the organization's convenience.

Audit Management

In order to remain in compliance with the GDPR, companies need to map plans for internal data protection audits that raise evidence to verify the compliance of the procedures with the regulation.

An audit focused on this regulation must verify the efficiency and effectiveness of the new incorporated processes, covering all aspects of the law and, finally, issue results of possible improvements or adjustments necessary to achieve full compliance with the regulation.

Using a corporate tool, the SoftExpert solution helps to control the entire audit process. The solution manages all stages, from audit planning, preparation, setting schedules, developing plans and checklists, to execution, recording findings, issuing reports and monitoring.

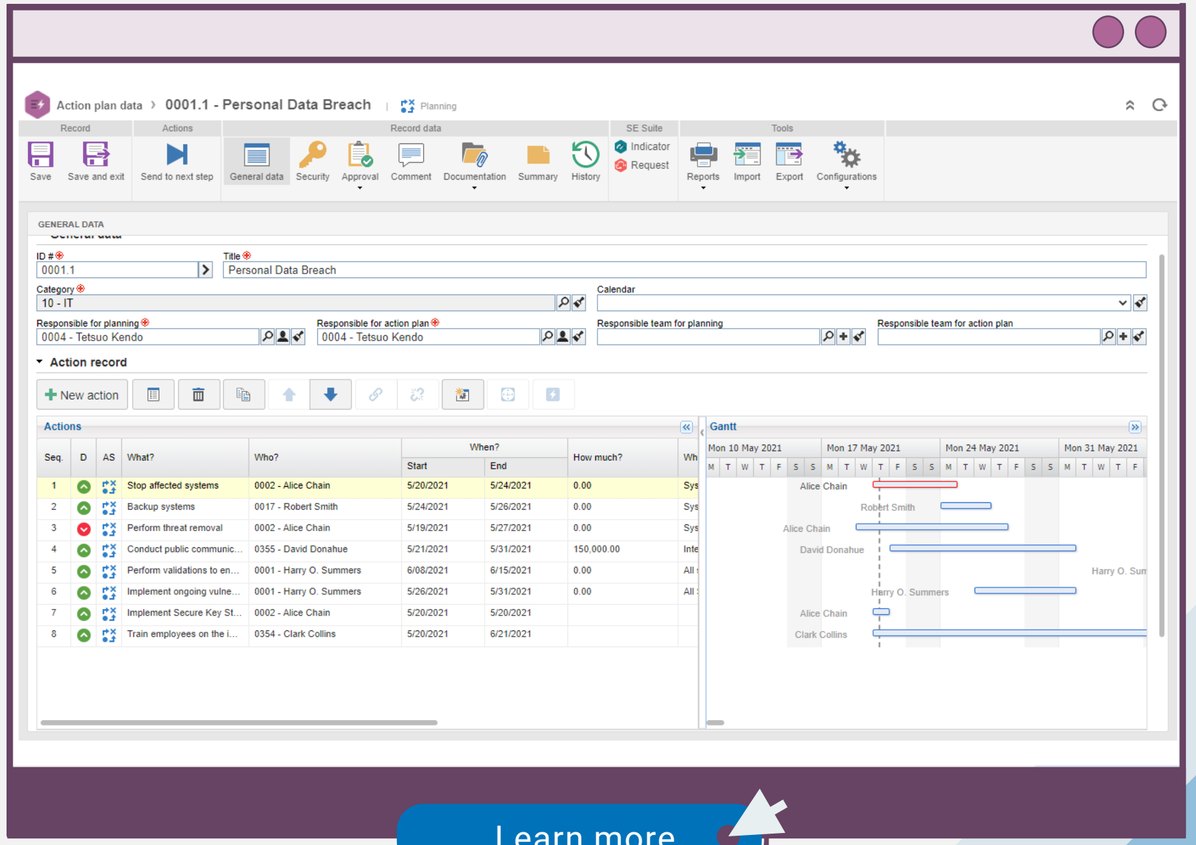

Action Management

To ensure compliance with the GDPR, the implementation of an action plan is necessary at different times:

- Non-conformities of internal data protection audits;- Non-conformities of audits by the competent control authority;
- Breach of personal data;
- Risk management.

Therefore, the use of a dynamic tool that assists in managing all the tasks of a company's action plans in a cohesive manner is a critical element to achieve success in compliance with the law.

The SoftExpert Excellence Suite presents an innovative solution to optimize the life cycle of the entire Action Plan. From its initial registration to its approval, the software maintains team communication and improves collaboration through centralized control of planning, execution and task monitoring. The application is easy to use and flexible, improving the speed of execution, the reliability and the efficiency of the tasks.

Training Management

GDPR requires several adjustments to procedures, policies, systems and personnel awareness, seeking to ensure compliance with the law. Due to all these changes, training should be offered in order to train people and incorporate the concern with information security and data privacy into the organizational culture.

It is essential that all employees have an overview of the law, understanding its importance for the organization, for the market and for society in general. Through periodic training, the knowledge that personal data must be treated properly will be disseminated, and, consequently, everyone will become agents that transform a new organizational culture.

The SoftExpert solution is ideal for the effective management of training in any organization. It guarantees the periodic planning of internal and external training, with the electronic application of tests and evaluations. It also allows you to program the use of places and support materials, optimizing the resources available in the company.

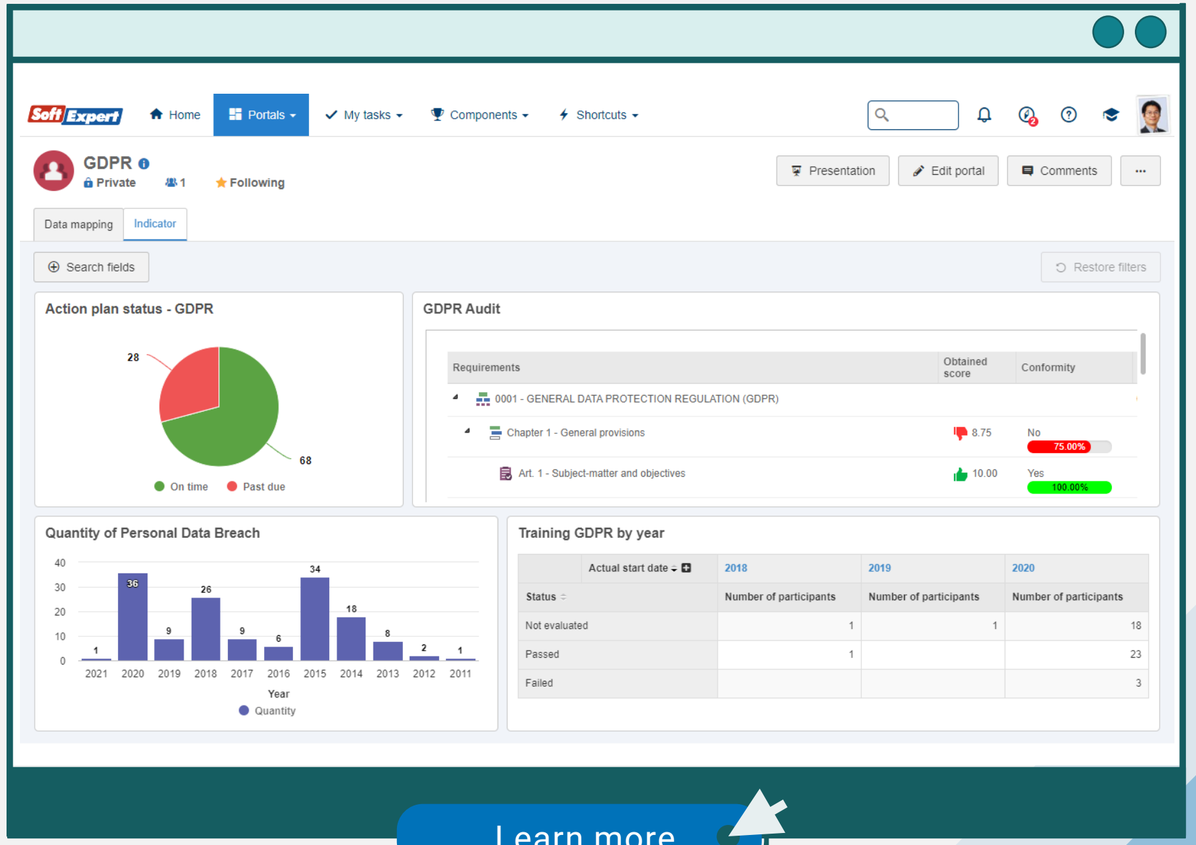

Indicator Management

The indicators can be used by organizations to obtain a regular analysis of the performance of GDPR compliance, checking for possible gaps as well as the status of other privacy initiatives.

Monitoring of results is also indicated to demonstrate compliance with the regulations for senior management. Showing the evolution of the actions and results obtained, as well as the role of privacy for citizens and employees of the organization, reinforces and strengthens the culture of data privacy.

The SoftExpert tool makes it possible to manage indicators related to GDPR using, even, personalized management portals. The solution goes beyond the simple measurement of the indicators, allowing to manage the performance of the compliance with the regulation in a robust and intelligent way.

Company

SoftExpert is the market leader in software and services for enterprise-wide business process improvement and compliance management, providing the most comprehensive application suite to empower organizations to increase business performance at all levels and to maximize industry-mandated compliance and corporate governance programs.

Founded in 1995 and currently **with more than 2,000 customers and 300,000 users worldwide,** SoftExpert solutions are used by leading corporations in all kinds of industries, including manufacturing, automotive, life sciences, food and beverage, mining and metals, oil and gas, high-tech and IT, energy and utilities, government and public sector, financial services, transportation, logistics and healthcare.

SoftExpert, along with its extensive network of **international partners, provides hosting, implementation, post-sales support and validation services for all solutions to ensure that customers get the maximum value from their investments.**

Meet our customers

SoftExpert Excellence Suite

SoftExpert Excellence Suite is the most comprehensive solution to collaboratively solve critical business excellence challenges into an integrated multi-application environment.

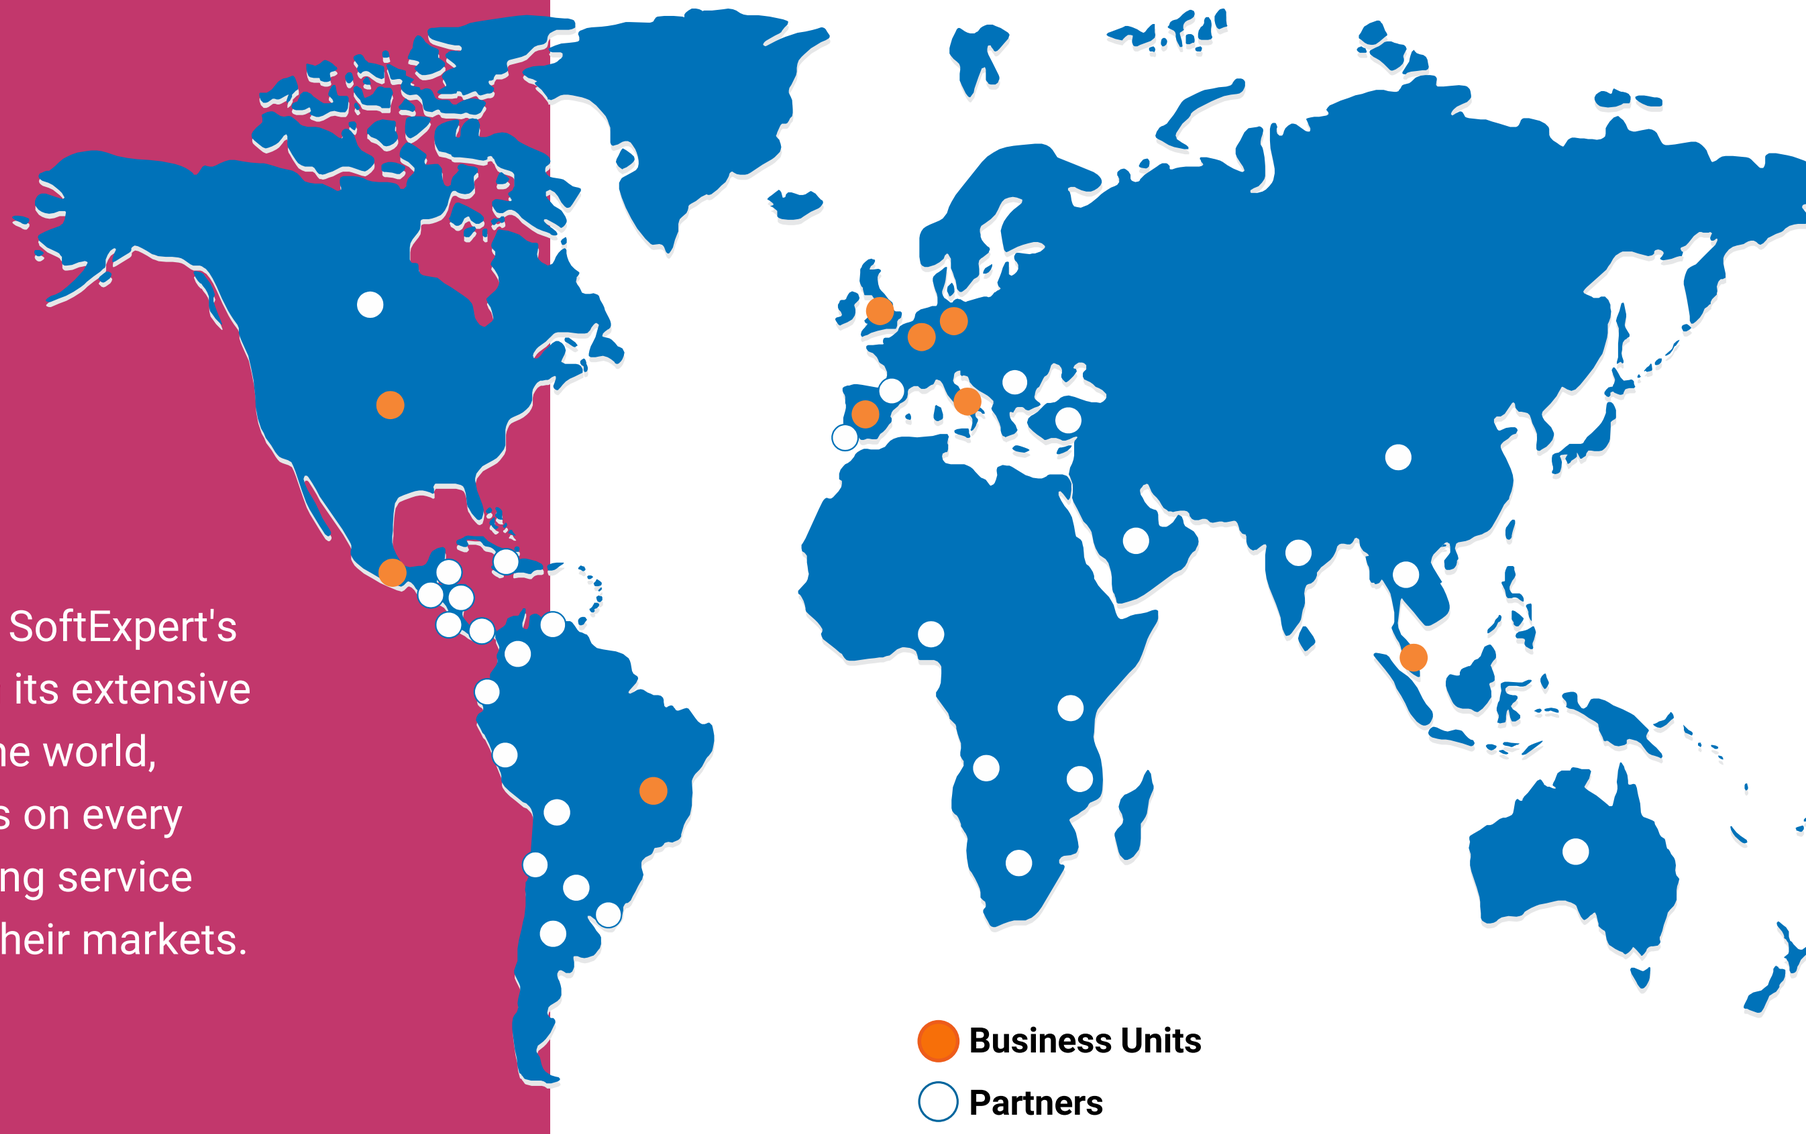

SoftExpert offers an integrated suite of components that can be implemented as business demands grow and the need to incorporate new functions.

Whatever the strategy chosen, only a fully shared Business Excellence environment allows its applications fit together like puzzle pieces and work seamlessly.

Thinking Global Acting Local

One of the driving forces behind SoftExpert's growth is its global footprint. With its extensive partnership network throughout the world, SoftExpert develops its operations on every continent offering customers strong service with a local approach specific to their markets.
